FLOW DIVIDER/COMBINER VALVE SPOOL TYPE.

DESCRIPTION

This unit is a spool type, screw in cartridge style, flow divider/combiner valve.

OPERATIONS

This valve divides flow from port 3 to ports 2 and 4 and combines flow from ports 2 and 4 to port 3 at the specified flow division regardless of load or system pressure.

Should the circuit operation result in blockage of either port 2 or 4, the opposite port will continue to flow but at a reduced flow rate to synchronize a cylinder.

FEATURES AND BENEFITS

Flow accuracy dividing or combining:

+/-5.0% of flows under 40% of the rated flow.

+/-2.5% of flows over 40% of the rated flow.

Quiet and stable operation over wide varying flow, pressure and temperature range.

All external carbon steel parts are plated for longer life against the elements.

All cartridge valves are 100% functionally tested.

Industry common cavity.
