PRESSURE COMPENSATOR
SPOOL TYPE, INLINE-TYPE COMPENSATING

DESCRIPTION
This unit is a DIRECT ACTING, SCREW IN CARTRIDGE STYLE, SPOOL TYPE, PRESSURE-COMPENSATING INLINE FLOW ELEMENT, intended for use with a remote fixed or variable orifice to yield a two-port (inline-type), pressure-compensated, flow regulating hydraulic valve.

OPERATIONS
This valve maintains a constant flow rate at port 2 regardless of load pressure changes in a circuit downstream of port 2. This cartridge compensator flow element maintains a constant differential pressure circuit point "P" to port 2 thereby regulating the hydraulic flow rate between the two points in the circuit. This is an inline type regulator, delivering only the exact amount of pump flow to port 2. All ports can be fully pressurized.

FEATURES AND BENEFITS
Leakproof screw adjustment.
This valve has a fixed or an adjustable bias spring.
Adjustment screw can not be backed out of the valve.
Overset protection – spring can not go solid.
Hardened precision fitted spool & cage provides reliable, long life.
A unibody cage construction provides very low hysteresis and reliable operation.
All external carbon steel parts are plated for longer life against the elements.
Valve is available with fixed, screw, tamperproof, capped and handknob adjustments.
All cartridge valves are 100% functionally tested.
Industry common cavity.
