PILOT OPERATED DUAL CHECK VALVE
WITH OPTIONAL THERMAL RELIEF

DESCRIPTION
This unit is a SCREW IN, cartridge type, guided poppet, hydraulic pilot operated dual check valve, for use as a blocking or load holding device for high pressure applications. Thermal relief option available in one direction.

OPERATIONS
This check valve allows free flow from port 2 to port 1 and from port 3 to port 4. It blocks flow from port 1 to port 2 and from port 4 to port 3 or holds a load. Flow will be allowed from port 1 to port 2 when pilot pressure is applied to port 3 that is higher than one-third of the load pressure at port 1. Flow will be allowed from port 4 to port 3 when pilot pressure is applied to port 2 that is higher than one-third of the load pressure at port 4. This pilot operated check valve has a 3 to 1 pilot ratio. Port 4 can be equipped with a thermal relief. The relief is set to open when the pressure in port 4 exceeds the relief setting.

FEATURES AND BENEFITS
All external carbon steel parts are plated for longer life against the elements. All cartridge valves are 100% functionally tested. Industry common cavity.
