

# Flow valve Throttle valve

Q<sub>max</sub> = 140 l/min, p<sub>max</sub> = 350 bar poppet type, mechanically adjustable Type series: MDPAA-10...

- Screw-in cartridge valve
- For cavity CA
- All external parts with zinc-nickel plating according to DIN EN ISO 19598
- Leak-free shut-off function
- For space-saving direct mounting in manifold blocks or housings
- Function possible in both directions.
- Available with hand-knob

# Description

These throttle valves, series MDPAA-10..., are size 10, mechanically operated screw-in cartridge valves with an M18×1.5 mounting thread. The vavles are designed on the poppet/seat principle, and they are therefore virtually leak-free in both directions of flow in the closed position. The pressure should preferably be connected to port A. These valves are mainly used

in mobile and stationary applications where a flow needs to be manually throttled or blocked. The setting is by means of an adjusting spindle. All external parts of the screw-in valves are zinc-nickel plated and are thus suitable for use in the harshest operating environments. For installation and further information, please refer to the section related data sheets.

# **Technical data**

General characteristics	Description, value, unit
Function group	Flow valve
Function	Throttle valve
Design	Screw-in cartridge valve
Controls	mechanically adjustable
Characteristic	poppet type
Construction size	NG 10
Thread size	M18×1,5
Mounting attitude	unrestricted
Weight	0.10 kg
Cavity acc. factory standard	For cavity CA
Tightening torque steel	50 Nm
Tightening torque aluminium	50 Nm
Tightening torque tolerance	± 10 %
Minimum ambient temperature	- 30 °C
Maximum ambient temperature	+ 80 °C
Surface protection	All external parts with zinc-nickel plating according to DIN EN ISO 19598
Seal kit order number	NBR: DS-253-N / FKM: DS-253-V

Hydraulic characteristics	Description, value, unit							
Maximum operating pressure	350 bar							
Maximum flow rate	140 l/min							
Flow direction	see symbol							
Hydraulic fluid	HL and HLP mineral oil according to DIN 51 524; other fluids on request!							
Minimum fluid temperature	- 30 °C							
Maximum fluid temperature	+ 80 °C							
Viscosity range	10 650 mm²/s (cSt)							
Recommended viscosity range	15 250 mm²/s (cSt)							
Minimum fluid cleanliness (cleanlineless class according to ISO 4406:1999)	class 20/18/15							

# Performance graphs

measured with oil viscosity 33.0 mm<sup>2</sup>/s (cSt)

## Installation information

i

i

NOTE!

1) When fitting the screw-in cartridge valve, use the specified tightening torque. The value can be found in the chapter "Technical data".

#### NOTE!

Set the required pressure with the adjusting screw (s1). After you have set the valve, lock the adjusting screw (s1) with the lock nut.

#### NOTE!

The seals are not available individually. The seal kit order number can be found in the chapter "Technical data".

# Ordering code

### ATTENTION!

Difficult adjustment by handknob from 150 bar, it is recommended to adjust the adjusting spindle with the hexagon socket (s2).

# ATTENTION!

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.
