

Flow Detector, Size 12

 $Q_{max} = 160 \text{ l/min } (42 \text{ gpm}), \quad p_{max} = 420 \text{ bar } (6000 \text{ psi})$ direct acting, spool type, pipe line mounting valve Series FD 12-E-...

- Requirements according to EN ISO 13849 can be fulfilled
- · High pressure rating, with safety factor of 3
- Low headloss
- Wide viscosity range
- Plug connection M12, A coding, for protection class IP 67
- · Non-contact switching
- Integrated PTC thermistor module (short-circuit protected)
- Stainless steel body, other exposed parts with zinc-nickel coating
- For line-mounting installations

1 Description

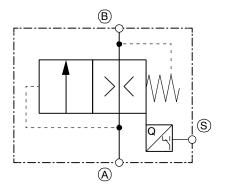

The flow detectors, series FD..., are size 12, direct-acting pipe-mounting valves with a G 1/2" threaded port. They are designed on the proven sliding-spool principle. These valves detect a preset flow rate and can be used for various monitoring functions.

Meeting the safety requirements of EN ISO 13849 often requires fitting an upstream valve as a second shut-off route. Its diagnostic information is provided by a downstream pressure transducer. In this way, a safe shut-off is always possible. The one remaining loophole is where a directional valve jams in the operated position, a situation that cannot be detected until another, parallel-connected actuator is op-

erated. This loophole can be closed with the flow detector, which is fitted downstream of the On/Off valve. When the On/Off valve is initially opened, there must be no significant flow. Next the respective directional valve should be oper-

Typically, the flow detector is used for mobile applications in which auxiliary actuators are supplied in parallel from one pressure source. This is required, for example, as a monitoring function for steering pumps in mobile machines. The body is stainless steel, all other exposed parts are zincnickel plated, and the flow detector is thus suitable for use in the harshest operating environments.

Beispiel für die Masseinheit: Example for the dimensional units: 0.79 = 0.79 mm millimeter

6 Installation information

ATTENTION!

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.

IMPORTANT!:

Protect flange surfaces from damage and observe connection designations.

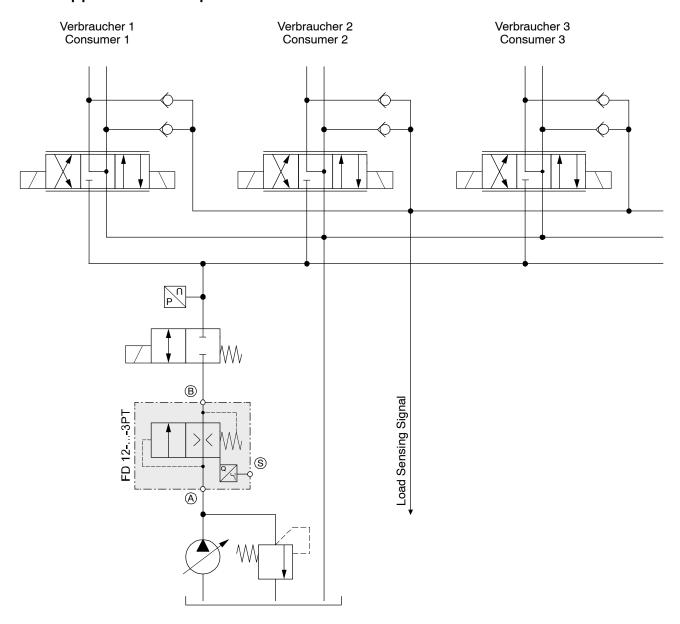

IMPORTANT!:

The valve may only used for ist intended purpose within ist nominal rating. If you plan to use it outside the nominal rating, you must contact the valve manufacturer.

The ultimate responsibility for safety in the installation and use rests with the end-machine manufacturer of the mobile application.
